Specification

- Steel
  Plain
- Joint bearing areas / pins / bearing sleeves
  Case-hardened
- *Keyway JS9 DIN 6885 → Page 2078*
- *Cross Holes GN 110.1 → Page 2081*
- *ISO Fundamental Tolerances → Page 2151*
- RoHS

On request

- Different lengths l_1 - l_2
- Bores without keyway
- Bores with square
- Bores with hexagon
- With other or unequal bores
- Version in stainless steel
  (Friction bearing not rustproof)

Information

Universal joint shafts with friction bearing GN 808.2 not only join the offset between two shafts, but also enable the alignment of lengths, which depending on the overall length l_1 enables the corresponding extraction length l_2. The power transmission is achieved by two universal joints DIN 808 (Type EG) a spline shaft and a sliding sleeve.

It is important to check the accuracy when connecting the spline shaft to the sliding sleeve.
The markings → ← have to be opposite to each other. Any kind of misconnection leads to an inhomogeneous output and to a quick abrasion.
